Connect a GitHub Repo with AWS

Sayed Mahmeer Ali Shah

```
Installed:
  git-2.47.1-1.amzn2023.0.3.x86_64      git-core-2.47.1-1.amzn2023.0.3.x86_64      git-core-doc-2.47.1-1.amzn2023.0.3.noarch
  perl-Error-1:0.17029-5.amzn2023.0.2.noarch  perl-file-Find-1.37-477.amzn2023.0.7.noarch  perl-Git-2.47.1-1.amzn2023.0.3.noarch
  perl-TermReadKey-2.38-9.amzn2023.0.2.x86_64  perl-lib-0.65-477.amzn2023.0.7.x86_64

Complete!
[ec2-user@ip-172-31-18-198 ~]$ git --version
git version 2.47.1
[ec2-user@ip-172-31-18-198 ~]$
```

Introducing Today's Project!

Today we'll set up Git and Github, connect our project to it, and also see the changes and updates to Github Repo.

Key tools and concepts

move on

Project reflection

yeah thank you

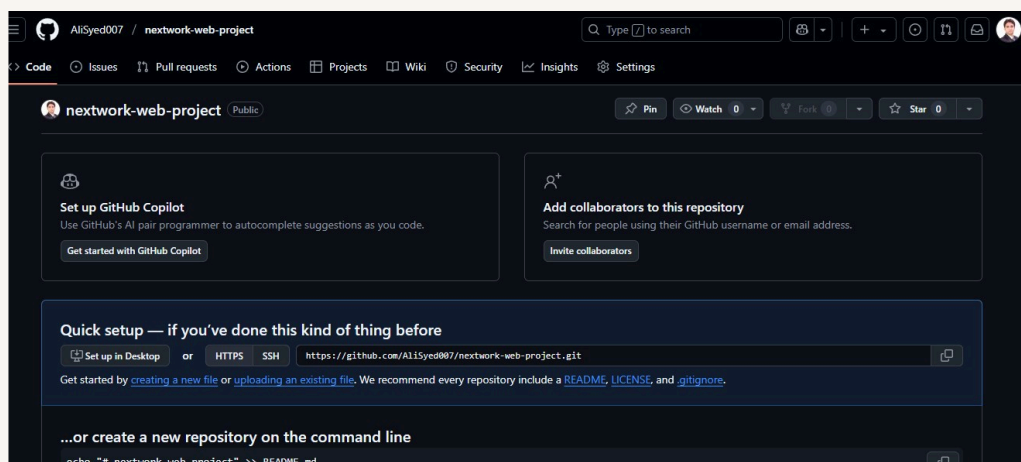

on saturday

Git and GitHub

Git is the most commonly used version control system. Git tracks the changes you make to files, so you have a record of what has been done, and you can revert to specific versions should you ever need to. `sudo apt install git -y` to install it.

GitHub is like a storage where we store our data or projects in repositories. I'm using GitHub in this project to store my application code.

My local repository

A Git repository is a storage where you store your code using Git.

git init is a command that is used to initialize to connect the git repository to our directory. I ran git init in my nextwork-web-project to track changes of the code.

After running git init, the response from the terminal was full of yellow hints. A branch in Git is an alternate or parallel version of it.

```
ec2-user@ip-172-31-18-198 nextwork-web-project]$ git init
Reinitialized existing Git repository in /home/ec2-user/nextwork-web-project/.git/
```

To push local changes to GitHub, I ran three commands

git add

command 1: `git add .` command 2: `git commit -m "Updated index.jsp with new content"`
command 3: `git push -u origin master`

git commit

lets move

git push
